Simon Sinek laat in 'Begin met het Waarom' zien dat organisaties en leiders die zich richten op het Waarom van hun bedrijf succesvoller, invloedrijker en innovatiever zijn. Leiderschapsstijlen kunnen verschillen, maar alle grote, inspirerende leiders hebben één ding met elkaar gemeen: ze weten dondersgoed waarom ze doen wat ze doen. Toch sneeuwt bij veel bedrijven het Waarom nogal eens onder in de hectiek van de dag. 'Begin met het Waarom' helpt je om het Waarom weer centraal te stellen en zo beter en authentieker leiding te geven en je omgeving te inspireren. Met vele voorbeelden uit de praktijk toont Sinek aan dat het werkt. Dit boek is gebaseerd op de ideeën uit zijn TEDX-talk over leiderschap, waarmee hij wereldwijd de aandacht trok.

There is a shortage of leadership talent, in healthcare as well as other industries, and it is worsening, proclaims Dye, a consultant with a human-resources background in the health care industry. Therefore, he says, the top strategic and tactical priority of every organization must be to find and keep the great talent that is available. Annotation copyrighted by Book News Inc., Portland, OR.

In Building Sustainable Competitive Advantage Dharendra Kumar shows how the Enterprise Excellence (EE) philosophy is a holistic approach for leading an enterprise to total excellence. It does this by focussing on achieving sustainable significant growth in revenue and profitability, reducing the business cycle time, strategically managing the enterprise risk and focusing on the needs of the customer. There may be various organizations within an enterprise but they must all focus on meeting or exceeding customer needs. Therefore, EE is an integrated approach affecting every employee, every functional area and strategy within the organization. Enterprise risk must be identified, assessed and prioritized; developing a growth strategy proposal which leadership has to execute in order to achieve goals. As business leaders spearhead the efforts, they must minimize, monitor and control the probability and/or impact of unfortunate events and maximize the realization of opportunities. The achievements in Enterprise Excellence can range from greater cost efficiencies, improved market perceptions, fundamental changes to markets, to new product and service offerings. There may also be significant upgrades in skills, technology, and business strategies. The scope of Enterprise Excellence can also range from operations activities, to business functions, to overall organization and to the enterprise as a whole. Building Sustainable Competitive Advantage is a comprehensive reference book for practising professionals, teaching faculty, and students alike.

By bringing together ground-breaking research studies detailing the development and validation of leadership activities and resources that promote effective public health practice in a variety of settings, we seek to provide a basis for leading public health organizations. We encouraged contributions that assess the effectiveness of public health leaders, as well as critical discussions of methods for improving the leadership of public health organizations at all levels. Both ongoing and completed original research was welcome, as well as methods, hypothesis and theory, and opinion papers. The effective practice of public health leadership is a key concept for public health practitioners to clearly understand as the 21st century unfolds. Following the significant lapses of leadership in the for-profit world, leaders in governmental and not-for-profit agencies are required to learn by their failed examples. A major task facing all current and prospective public health practitioners is developing the required leadership skills in order to be effective twenty first century leaders. As a consequence of the rapidly evolving health of the public, as well as the development of the discipline and practice of public health, understanding the principles and attributes of leadership are now required of all public health practitioners. Leadership can be described in a variety of ways. Leadership in public health requires skillful individuals meeting the health challenges of communities and the population as a whole. Leadership may be defined as a process that occurs whenever an individual intentionally attempts to influence another individual or group, regardless of the reason, in an effort to achieve a common goal which may or may not contribute to the success of the organization. Thus leadership is a process involving two or more people. The nature of leadership is an important aspect of the concept as a whole. Submissions relating public health leadership to the management of public health organizations were welcomed. This Research Topic provided the opportunity for authors to consider the concept of leadership from a variety of approaches. Original research papers considering a variety of leadership theories provide methodological approaches to the topic. Hypothesis and theory papers provide the basis for application of leadership to public health practice. Opinion papers provide the opportunity to develop thinking concerning practice of public health leadership.
