In the 15 years since the first edition of Handbook on Animal-Assisted Therapy published, the field has changed considerably. The fourth edition of the Handbook highlights advances in the field, with 11 new chapters and over 40% new material. In reading this book, therapists will discover the benefits of incorporating animal-assisted therapy (AAT) into their practices, best practices in animal-assisted intervention, how to design and implement animal-assisted interventions, and the efficacy of AAT with different disorders and patient populations. Coverage includes the use of AAT with children, the elderly, those receiving palliative care, as well as people with chronic disorders, AIDS, trauma, and autistic spectrum disorders. Additional chapters cover techniques for working with families, in juvenile and criminal justice systems, and in colleges and universities. Summarizes efficacy research on AAT Identifies how to design and implement animal assisted interventions Provides methods, standards, and guidelines for AAT Discusses AAT for children, the elderly, and special populations Describes AAT use in different settings Includes 11 new chapters and 40% new material

She takes you into the afterlife to get a glimpse of the soul and what it is like when we journey onto our next adventure. She tells you heart-touching stories that relate to these journeys, in the end, bringing death into the light to take its place in the circle of life.

Have You Ever Wondered About The True Nature Of The Universe? What Is Beyond The Mysterious Beyond? Is There Another Life Somewhere? While many explorers are trying to find answers to our questions, Dr. Robert Lanza comes forward with a revolutionary new view of the universe. Understanding Biocentrism will trigger more questions that relate to our traditional ideas of life, space, and death. Biocentrism seem to bridge the gap between the existences of life contradicting the teachings of physics. This book penetrates biocentrism and the ideology of Dr. Robert Lanza and other professionals before him who in one way or another shares the same ideology as he does. This book attempts to answer the following questions: o What is biocentrism? o What is the connection of biocentrism and the universe? o What are the teachings of quantum physics and biocentrism? o What is the ideology behind intellicentrism and universecentrism? o How are these ideology compare to biocentrism? o What are the principles of biocentrism?

Can anything be more agonizing than the burden of an idea that we are doomed to die at the end? Imagine all your struggles on this earth, and the experiences you had acquired, will one day be gone as that flash of life energy leaves the encumbered casing. That is exactly what most people accept to be true. Our inability to understand our soul's journeys is our inability to understand our physical and immaterial existence. That most of us cannot differentiate physical material and nonphysical immaterial existence is reason enough not to understand creation and its purpose. But once we understand, we begin to see the purpose for physical material death and the reason for the immaterial part of us to rejuvenate by taking a new cocoon—a new body—to continue its journeys and its purpose to learn and experience. Always remember that life existed before creations.

Over a 3-day weekend in the spring of 2004 a group of scientists interested in extending understanding of place as applied in recreation research and management convened a working session in Portland, Oregon. The purpose of the gathering was to clarify their understanding of place-related concepts, approaches to the study of people-place relations, and the application of that understanding in recreation management for the purpose of integrating perspectives from different disciplines, discussing approaches to understanding and measuring sense of place, and other questions around the study and application of place-related concepts. Topics that generated the most discussion included how social processes influence place meanings, how place meanings are shared and negotiated within social groups, and when and how place meanings and attachments focus, reduce, or avert conflict in natural resource planning and management. This collection of papers is a result of that meeting.

FFaith Physics is a new Theory of Everything (ToE) combining ancient spiritual wisdom and modern quantum physics findings to deliver a belief system that is both intellectually sound and spiritually satisfying. It maintains an ineffable Supreme Consciousness is the catalyst of all material creation as a ‘great thought’ through pure white light in zero-point morphogenetic quantum fields. Faith Physics claims that consciousness is the cornerstone of base reality existing in a timeless state of now. By using the natural cause-and-effect laws of classical physics, the uncertainty principle of quantum mechanics, and dark matter/energy, Faith Physics posits pure consciousness manifests physical creation in a remarkable myriad of forms. In the wave/particle duality paradigm revealed by quantum mechanics, conscious observation transforms light energy into particulate physical matter as condensed or frozen light in accordance with Albert Einstein’s famous E=mc2 equation. Faith Physics teaches us we exist and thrive in a unified participatory universe emanating from an eternal Supreme Consciousness source, and we are not just a product of random-chance evolution. In the 21st century, religion and science are reaching an enlightened consensus that pure metaphysical consciousness is perpetually painting a picture on the space-time continuum canvas depicting a miraculous cycle of physical creation, entropy, and cosmic rebirth.

Are beliefs in God and in the soul merely relics of pre-scientific superstition? After all, in the twentieth and twenty-first centuriesthe so-called age of sciencewe know that science can be proven by its fruits: its helped us split the atom and put men on the moon. Religious faith, on the other hand, couldnt accomplish these feats. This conflict leaves modern-day Christians challenged by materialist atheists who claim that faith in God has been discredited by modern physics and psychology. The Divine Sting answers their challenge. Contrary to what most Christians think, belief in God and the soul need not remain matters of religious faith. In fact, it is the atheists themselves who ignore Einsteins shocking revelation about modern sciencethat the physical universe, including the human body and its brain, have never been observed. We have rather only observed mental effects whose source we can only guess at. Atheists naive claims about scientific observation are themselves nothing less than an article of anti-scientific faith. By integrating facts traditionally segregated into categories of philosophy versus theology versus modern science, The Divine Sting will assist you in discovering for yourself how to convert faith in God and belief in the soul into solid, impregnable, and justifiably certain science.

A number of authors have noted that if some physical parameters were slightly changed, the universe could no longer support life, as we know it. This implies that life depends sensitively on the physics of our universe. Does this "fine-tuning" of the universe suggest that a creator god intentionally calibrated the initial conditions of the universe such that life on earth and the evolution of humanity would eventually emerge? In his in-depth and highly accessible discussion of this fascinating and controversial topic, the author looks at the evidence and comes to the opposite conclusion. He finds that the observations of science and our naked senses not only show no evidence for God, they provide evidence beyond a reasonable doubt that God does not exist.

Theorieën over recht en rechtvaardigheid zijn altijd abstract. Toch worden ze bedacht om oplossingen te zoeken voor heel concrete, dagelijkse problemen. In Grensgebieden van het recht stelt Martha Nussbaum deze paradox aan de orde. Aan de hand van drie urgente problemen de positie van mensen met een handicap, van immigranten en van dieren waarvoor tot nu toe niet alleen in theorie, maar ook in de dagelijkse praktijk geen goede oplossingen gevonden zijn, gaat zij op zoek naar concrete denkbeelden over sociale rechtvaardigheid. Deze ideeën kunnen ons leiden naar een verantwoorde omgang met deze problemen.

Respect for Nature defends a biocentric theory of environmental ethics. Without making claims for the moral rights of plants and animals, Paul Taylor offers a reasoned alternative to the prevailing anthropocentric view, according to which the natural environment and its wild biotic communities are valued only as objects for human use or enjoyment.

De jongen die in de hemel was is het bijzondere verhaal van de vierjarige Colton, die op stel en sprong moest worden geopereerd aan een acute blindedarmontsteking. De artsen onderkenden te laat dat de situatie levensbedreigend was, en tijdens de operatie krijgt Colton een hartstilstand. Wonder boven wonder herstelt Colton en niet lang daarna begint hij te vertellen over de operatie: dat hij de artsen met hem bezig zag en dat hij zijn vader in een aparte kamer op zijn knieën zag bidden. De familie weet niet zo goed wat ze ermee aan moet, maar al snelhopen de bewijzen zich op. Colton vertelt dat hij zijn zusje, wier leven na drie maanden eindigde in een miskraam en over wie nooit werd gesproken, zijn overgrootvader en zelfs Jezus heeft gezien. Over al deze mensen weet hij details die hij nooit had kunnen weten en de familie realiseert zich gaandeweg dat ze Colton wel moeten geloven...

Een zoektocht naar de theorie van alles Ruimte en tijd zijn de basiselementen van de kosmos. Maar wat zijn ruimte en tijd eigenlijk? Is ruimte een reëel bestaand iets? Waarom heeft tijd een richting? Zou het universum zonder ruimte en tijd kunnen bestaan? En de centrale vraag: hoe zit de kosmos in elkaar? De ontrefaling van de kosmos neemt de lezer mee op reis naar nieuwe lagen van de werkelijkheid, met briljant gebruik van analogieën én met humor. Van de inzichten van Newton en Einstein tot de meest recente ideeën op het gebied van de supersnaar- en M-theorie. Na het lezen van dit boek bekijkt u de werkelijkheid met andere ogen. Brian Greene (1963) studeerde aan Harvard University en Oxford University. Hij geldt als een groot deskundige op het gebied van de supersnaartheorie en geeft over de hele wereld lezingen. The Times noemt hem "De nieuwe Hawking, maar dan beter".

An entertaining and philosophical book about death and dying . . . An editor who over eight decades has experienced a unique assortment of physical and intellectual confrontations with death writes about them: in rock climbing, skiing, shipwreck, bear attack, murder, suicide, in blind faith, hospice, as a topic in discussion groups, grieving, obituary writing, memorial services, the afterlife, and choices in confronting life's end. About the author: John Fry wrote the award-winning book, The Story of Modern Skiing. Among his other books is A Mind at Sea: Henry Fry and the Glorious Era of Quebec's Sailing Ships. He also wrote hundreds of published articles on skiing, travel, business, and religion. He was a dedicated environmentalist and the editorial director of a half-dozen outdoor magazines published by the New York Times Co. and Times Mirror Co.

Hoe moeten geïnteresseerde lezers nog iets begrijpen van alle recente ideeën over de kosmos? In zijn boek legt Rovelli het nu aan een breder publiek uit. Zo laat hij zien hoe vaak oude conceptenen ideeën telkens weer opduiken. En misschien onbedoeld: ook hoezeer de natuurkunde zelf evolueert.

recently a reader wrote about pangasm: "I have read Pangasm and I continue to meditate on it.. I have been using it as kind of an inspiration for a modern form of Taoist sexual therapy. I use its principles as I work to merge the "earth chakras". The transformative energy has been tremendous. Reclaiming my "desire body" has reconciled so many divisions in my psyche. The process continues to unfold. Pangasm played a role in giving me the courage to become a massage therapist and its principles help me relate to and appreciate my clients, friends, spouse, lovers, etc... It has healed the place where I used to be afraid of women. What a brilliant message!"

Als jouw zorgen over de opwarming van de aarde zich beperken tot angst voor de stijgende zeespiegel, dan zie je slechts het topje van de ijsberg. Het is veel, veel erger dan je denkt. Klimaatverandering wordt vaak beschouwd als een langzaam proces, maar de onheilspellende effecten ervan zien we nu al: hete zomers, grote droogte, allesverwoestende overstromingen en orkanen. Natuurrampen die zich vroeger maar één keer in een mensenleven voltrokken, overvallen de mensheid tegenwoordig jaarlijks. In De onbewoonbare aarde brengt David Wallace-Wells de laatste wetenschappelijke inzichten samen tot een schokkende aanklacht: we slagen er maar niet in om een betere toekomst voor ons te zien, laat staan dat we naar zo'n idee handelen. Wallace-Wells luidt de alarmklok en vertelt ons alles wat we niet willen maar wel moeten weten over klimaatverandering. Als we onze aanpak van dit probleem en onze manier van leven niet snel veranderen, zullen delen van de aarde door desastreuze ontwikkelingen in de nabije toekomst onbewoonbaar worden.

A first-hand exploration of how to consciously step out of your body and navigate the Quantum Akashic Field • Details a step-by-step process of engaging extrasensory, out-of-body travel • Examines the quantum landscape of the Akashic Field, meetings with spirit guides, and descriptions of out-of-body experiences from the author’s personal journal and from world spiritual traditions, including the Bible and the Baghavad Purana • Explores current theories about the science of consciousness and sensory perception, including discoveries from quantum physics, and how these discoveries align with the traditional wisdom of shamans, dowzers, and mystics Physicists have recently discovered a whole quantum-based reality, a multidimensional world where all potentials simultaneously exist. Called the Akashic Field by systems scientist Ervin Laszlo, it is the same quantum reality that mystics, shamans, and dowzers have been exploring for thousands of years through astral travel, spirit journeying, and energy work. Revealing how to gain awareness of the Quantum Akashic Field through conscious out-of-body experiences (OBEs), Jim Willis shares fascinating firsthand accounts taken from the detailed OBE journals he has kept for nearly 10 years, alongside analysis of recent discoveries in quantum physics and wisdom from the world’s spiritual traditions. He details his own experiences with a wide variety of astral beings, spirit guides, landscapes, laws, and activities that he encountered in the Quantum Akashic Field. Drawing on scientifically-based principles that underlie the very nature of biological life, he explains how the brain is an organizer, not a producer, of consciousness. He explores the difference between dreams, visions, and OBEs and powerful ways to harness the imagination. Detailing a step-by-step process centered on safe, simple meditative techniques, Willis shows how to bypass the filters of your five senses while still fully awake and aware and engage in extrasensory, out-of-body travel. Sharing his journey to connect with universal consciousness and navigate the quantum landscape of the Akashic Field, he reveals how conscious OBEs allow you to penetrate beyond normal waking perception into the realm of quantum perception.

Daarbij hoort een nieuwe vorm van waarnemen die vooral gebaseerd is op intuïtie. Deze gaat hand in hand met hogere waarden, zoals eenheid, mededogen en vreugde. In ‘De kracht van waarneming’ biedt Penney Peirce, auteur van het succesvolle boek ‘Verhoog je trillingsfrequentie’, een uitgebreide gids ons laat zien hoe wij ons dit nieuwe waarnemen eigen kunnen maken en hoe we hooggevoeligheid en empathisch vermogen kunnen inzetten om nieuwe doelen te bereiken. Een wereld met ongekende mogelijkheden ligt binnen handbereik.

World-renowned psychic medium and Oxford-educated attorney Mark Anthony bridges the divide between faith and science in this fascinating afterlife exploration, taking you around the globe, from the cosmic to the subatomic, and into the human soul itself. Combining physics, neuroscience, and riveting true stories, this book: • reveals how our “electromagnetic soul” is pure eternal energy that never dies. • takes spirit communication, near-death experiences, and deathbed visions out of the shadows of superstition and into the light of twenty-first-century science. • presents Anthony’s RAFT technique to recognize contact with spirits, accept it as real, feel it without fear, and trust in the experience. • provides hope for recovery from grief, PTSD, survivor’s guilt, or a loved one’s suicide or homicide. • illuminates how contact with spirits is a powerful instrument of healing and love.

Oliver Sacks was bij vele lezers wereldwijd geliefd om zijn bijzondere neurologische casestudies, waarin hij er steeds in slaagde door de afwijkingen heen de mens te zien. Ook schreef hij enkele openhartige autobiografische werken waarin hij vertelde over de vele ontmoetingen en ervaringen die hem hebben gevormd. In De rivier van het bewustzijn zijn essays bijeengebracht die getuigen van Sacks’ passie voor enkele van de belangrijkste thema's van het menselijk denken: evolutie, tijd, creativiteit, herinnering, bewustzijn en ervaring. Het was een van de twee boeken waaraan hij tot aan zijn dood werkte, en toont zijn vermogen tot het leggen van onverwachte verbandingen, zijn plezier in kennis en zijn onvermoeibare streven te ontdekken wat ons tot mens maakt.

"Is Biocentrism Dead?" It is a topic that many find a bit off putting but it is a question that many individuals are starting to pose as they become wiser. The book explains what biocentrism is and how the tenets that surround this concept came into being. This is a book that the inquiring mind will appreciate thus it is ideal for the individuals who want to learn more about themselves and the world around them. The author gradually disseminates the information to the reader, allowing them to fully understand what biocentrism really means.

The education system provides a great way to peer into the potential of the human mind, but it ' s come up short in unleashing it. Marquis R. Nave, who has taught English at the college level for 10 years, has discovered that student ' s minds are the center of education and that their ideas about their mental capabilities is crucial to developing a new education. Students who don ' t believe in the creative power of their minds end up being trained to do work. Educators and educational institutions

must help them activate their mental potential so they can create solutions for themselves and the world. In a series of essays, Nave examines the shortcomings of the education system, challenging the way we perceive and think about knowledge, education, and our own awareness. A second section helps students write effective, college-level essays. Whether you ' re a student, an educator, or a supporter of educational reform, A New Education for New Minds will spark ideas that have long lingered in your own mind.

This book is a selection of essays and poems by the German philosopher and psychologist, Ludwig Klages. He was a fierce critic of what he saw as the lack of quality in the modern world, which he held to be a product of the false ideas and belief systems of our times. For Klages, the world is divided between forces and ideas that enhance life in all its vigor (such as those of Nietzsche), and those which oppose life by reducing it to mere materialism, and by portraying it as something to be shunned as innately corrupt and evil (such as modern religion). To overcome the life-denying forces, Klages calls for a return to the pagan view of life, and to a direct relationship between humanity and the natural world, and opposition to the destruction of nature by the agents of progress. He also opposed the distortions and falsehoods which he claimed were being propagated by psychoanalysis. "Those who confidently predict the end of all life and the ultimate doom of the cosmos are mere swindlers, Klages assures us. Those who cannot successfully predict such mundane trivialities as next season's fashions in hemlines or the trends in popular music five years down the road can hardly expect to be taken seriously as prophets who can foretell the ultimate fate of the entire universe " - From the Introduction by Joseph D. Pryce Ludwig Klages (1872-1956) has become one of the twentieth century's most unjustly neglected thinkers. Born in Hanover, Germany, in his youth he was one of the founders of the Cosmic Circle in Munich, which was centered on the ideas and poetry of Stefan George. He went on to become an important critic of the trends in philosophy, psychology and society of his day, and was often praised even by his adversaries. Klages rejected the modern world that he saw in development, calling instead for a renewal of civilization based upon the ideas of ancient Greece and German Romanticism. Klages was also responsible for making the unconscious the focus of modern psychology, and for introducing such terms as the "Id" and the introvert-extrovert scale to the discipline, although others were destined to take credit for these discoveries. He was honored by the German government with a Festschrift in conjunction with his 80th birthday.

Investigates and questions the scientific consensus on the origins of civilization Do we, the human species, really know who we are or where we came from or how we originated or our place in the cosmos? Or is much of what we have been taught wrong or misguided or possibly even blatant lies intended to keep people in power and everyone else in line? Exploring alternative theories on the establishment of society and civilization, Hidden History: Ancient Aliens and the Suppressed Origins of Civilization looks at a variety of dissenting, suppressed, and forbidden accounts of history and the origins of humanity. It takes a broad and inclusive survey of historical documents, various theories, and a wide array of perspectives to explore what conventional wisdom might have gotten right and wrong. The book serves as a useful introduction into the suppressed accounts of the origins of modern civilization. It combines cutting-edge science with metaphysical, spiritual, and even paranormal views, daring to ask whether there might be a better explanation for humanity ' s existence and the origins of civilization than the current scientific consensus. Hidden History looks at the multiverse and parallel dimensions, the ancient alien theory, metaphysics, and hypotheses beyond physical perception, the eleven dimensions of string theory, radio telescopes that penetrate to the event horizon of our universe, mathematical equations that take us where no one has gone before, and the world-wide sharing of experiences old and new that speak of long forgotten ancient mythologies that reveal historical truths. With more than 120 photos and graphics, this tome is richly illustrated. Its helpful bibliography provides sources for further exploration, and an extensive index adds to its usefulness. This fascinating book is a thorough investigation and examination of the mysteries surrounding early civilizations, their myths, legends, histories, monuments—and lasting legacies. Wat is ruimte, wat is tijd? En de mysterieuze donkere materie? Hoe passen wij binnen het universum? Hoe past het universum in ons? Maar tegenwoordig hebben we weinig tijd om over de kosmos na te denken. You ' ve probably heard dire warnings about artificial intelligence from figures such as the late Stephen Hawking and Elon Musk regarding the dangers of artificial intelligence. We shouldn ' t dismiss these experts, but we can harness the potential of AI to build a future that is both sustainable and profitable beyond our dreams. To accomplish this, we must bring together leadership teams from various fields to mindfully grow, develop, and integrate AI technologies in the most ethical, secure, and transparent ways possible. Susan and Todd Rebner take a deep dive into AI, highlighting how companies, agencies, educational institutions, brick and mortar retail stores, financial giants, and individuals can use it to create a better future. Their crucial point is that in the hands of the right organizational leader, AI will be seen as the most powerful tool humanity has ever created to solve the world's greatest problems, not create them.

In this book, we have hand-picked the most sophisticated, unanticipated, absorbing (if not at times crackpot!), original and musing book reviews of "Biocentrism: How Life and Consciousness are the Keys to Understanding the True Nature of the Universe." Don't say we didn't warn you: these reviews are known to shock with their unconventionality or intimacy. Some may be startled by their biting sincerity; others may be spellbound by their unbridled flights of fantasy. Don't buy this book if: 1. You don't have nerves of steel. 2. You expect to get pregnant in the next five minutes. 3. You've heard it all.

Building on quantum physics, Biocentrism turns the planet upside down with the revolutionary view that life creates the universe rather than the other way around. The central claim of Biocentrism is that what is referred to as space and time are forms of animal perception rather than external physical objects. Lanza and Berman take readers on a fascinating journey through a foreign universe - our own - that will alter their perception of reality for ever.

Robert Lanza is one of the most respected scientists in the world — a US News & World Report cover story called him a " genius" and a " renegade thinker," even likening him to Einstein. Lanza has teamed with Bob Berman, the most widely read astronomer in the world, to produce Biocentrism, a revolutionary new view of the universe. Every now and then a simple yet radical idea shakes the very foundations of knowledge. The startling discovery that the world was not flat challenged and ultimately changed the way people perceived themselves and their relationship with the world. For most humans of the 15th century, the notion of Earth as ball of rock was nonsense. The whole of Western, natural philosophy is undergoing a sea change again, increasingly being forced upon us by the experimental findings of quantum theory, and at the same time, towards doubt and uncertainty in the physical explanations of the universe's genesis and structure. Biocentrism completes this shift in worldview, turning the planet upside down again with the revolutionary view that life creates the universe instead of the other way around. In this paradigm, life is not an accidental byproduct of the laws of physics. Biocentrism takes the reader on a seemingly improbable but ultimately inescapable journey through a foreign universe—our own—from the viewpoints of an acclaimed biologist and a leading astronomer. Switching perspective from physics to biology unlocks the cages in which Western science has unwittingly managed to confine itself. Biocentrism will shatter the reader's ideas of life--time and space, and even death. At the same time it will release us from the dull worldview of life being merely the activity of an admixture of carbon and a few other elements; it suggests the exhilarating possibility that life is fundamentally immortal. The 21st century is predicted to be the Century of Biology, a shift from the previous century dominated by physics. It seems fitting, then, to begin the century by turning the universe outside-in and unifying the foundations of science with a simple idea discovered by one of the leading life-scientists of our age. Biocentrism awakens in readers a new sense of possibility, and is full of so many shocking new perspectives that the reader will never see reality the same way again.

Biocentrism shocked the world with a radical rethinking of the nature of reality. But that was just the beginning. In Beyond Biocentrism, acclaimed biologist Robert Lanza, one of TIME Magazine's ""100 Most Influential People in 2014,"" and leading astronomer Bob Berman, take the reader on an intellectual thrill-ride as they re-examine everything we thought we knew about life, death, the universe, and the nature of reality itself. The first step is acknowledging that our existing model of reality is looking increasingly creaky in the face of recent scientific discoveries. Science tells us with some precision that the universe is 26.8 percent dark matter, 68.3 percent dark energy, and only 4.9 percent ordinary matter, but must confess that it doesn't really know what dark matter is and knows even less about dark energy. Science is increasingly pointing toward an infinite universe but has no ability to explain what that really means. Concepts such as time, space, and even causality are increasingly being demonstrated as meaningless. All of science is based on information passing through our consciousness but science hasn't the foggiest idea what consciousness is, and it can't explain the linkage between subatomic states and observation by conscious observers. Science describes life as an random occurrence in a dead universe but has no real understanding of how life began or why the universe appears to be exquisitely designed for the emergence of life. The biocentrism theory isn't a rejection of science. Quite the opposite. Biocentrism challenges us to fully accept the implications of the latest scientific findings in fields ranging from plant biology and cosmology to quantum entanglement and consciousness. By listening to what the science is telling us, it becomes increasingly clear that life and consciousness are fundamental to any true understanding of the universe. This forces a fundamental rethinking of everything we thought we knew about life, death, and our place in the universe.

Reminiscing the events from many decades ago and putting them into words, structuring to reflect the chronology and nuances of human interactions, especially between parents and children who share many facets of their lives together, was the easiest part of this endeavor. The difficult part was to walk the very fine line of respecting the diversity of opinions within the family members relevant to each event or issue and to avoid being judgmental or biased.
